CRUSHED STONE AND SAND AND GRAVEL IN THE FOURTH QUARTER 2016

An estimated 328 million metric tons (Mt) of crushed stone was produced and shipped for consumption in the United States in the fourth quarter of 2016, an decrease of 4% compared with that of the same period of 2015. The estimated annual output of crushed stone produced for consumption in 2016 was 1.37 billion metric tons (Gt), an increase of 3% compared with that of 2015.

The estimated U.S. output of construction sand and gravel produced and shipped for consumption in the fourth quarter of 2016 was 228 Mt, a decrease of 3% compared with that of the same period of 2015. The estimated annual output of construction sand and gravel produced for consumption in 2016 was 959 Mt, a slight increase compared with that of 2015.

An estimated 556 Mt of total construction aggregates was produced and shipped for consumption in the United States in the fourth quarter of 2016, a decrease of 4% compared with that of the same period of 2015 (fig.1). The estimated annual output of construction aggregates produced for consumption in 2016 was 2.33 Gt, an increase of 3% compared with that of 2015 (fig.2).

The above estimates are based on information reported to the U.S. Geological Survey (USGS) quarterly sample survey by crushed stone and construction sand and gravel producers.

Shipments of portland and blended cement decreased slightly in the fourth quarter of 2016 compared with the fourth quarter of 2015. Annual consumption increased slightly in 2016, compared with that of 2015. This information is obtained from the USGS monthly survey of U.S. cement producers.

This sample survey generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. Often, a few companies may report amounts sold in the current quarter that vary greatly from the amounts reported in the previous year during the same quarter. This change in sales is rarely an indicator of the change in the demand in the State as a whole. Typically, a large change in sales can be attributed to the opening or closing of an operation, the weather, or an external force that only the company or one of its operations experienced in that quarter. Previously reported data are occasionally

revised, and the estimated quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and supersedes previously published reports.

The estimated production for consumption of crushed stone in the fourth quarter of 2016 decreased in seven of the nine geographic divisions compared with that sold or used in the fourth quarter of 2015. Production for consumption decreased in 25 of the 46 States for which production estimates of crushed stone were made.

The estimated production for consumption of construction sand and gravel in the fourth quarter of 2016 decreased from fourth quarter 2015 levels in six of the nine geographic divisions. Production for consumption decreased in 27 of the 45 States for which production estimates of construction sand and gravel were made.

The estimated production for consumption of construction aggregates in the fourth quarter of 2016 decreased in seven of the nine geographic divisions compared with that sold or used in the fourth quarter of 2015. In the fourth quarter, production for consumption decreased in 23 of the 43 States for which production estimates of construction aggregates were made. The five leading States in the fourth quarter of 2016 were, in descending order of production, Texas, California, Ohio, Pennsylvania, and Michigan. Their combined total production for consumption was 159 Mt (29% of the U.S. total).

The estimated total annual production for consumption of construction aggregates in 2016 increased, compared with that in 2015, in 28 of the 50 States for which estimates were made. The five leading States were, in descending order of total annual output for 2016, Texas, California, Pennsylvania, Ohio, and Florida. Their combined total annual output was 661 Mt, a slight increase when compared with that of 2015.

List services and Web feed subscribers are the first to receive notification of USGS minerals information publications and data releases. For information on how to subscribe, go to <http://minerals.usgs.gov/minerals/>.

Figure 1. Percentage change in the amount of construction aggregates produced and shipped for consumption in the United States each quarter from 2005 through 2016. All comparisons are versus the same quarter of the prior year.

Figure 2. Estimated annual output of construction aggregates produced and shipped for consumption in the United States from 1945 through 2016.

W Withheld to avoid disclosing company proprietary data.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions.

³State not included in quarterly survey.

⁴Compared with same period of preceding year; all percentages are calculated using unrounded totals.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions.

³State not included in quarterly survey.

⁴Compared with same period of preceding year; all percentages are calculated using unrounded totals.
